BUSINESS ARCHITECTURE

AIM

To design the business architecture of the **Online Resume Builder System** for managing user registration, resume creation, editing, template selection, preview, PDF download, and secure data management.

OBJECTIVE

To develop a structured workflow that allows users to register, login, enter resume details, choose suitable templates, preview resumes, download them as PDF files, and manage resume information efficiently.

DESCRIPTION

The **Online Resume Builder System** helps users create professional resumes through an online platform. Users can enter personal details, educational qualifications, skills, work experience, projects, certifications, and achievements. The system stores the details securely in the database and allows users to select a professional resume template.

MODULES

- User Layer
- Web Application Layer
- Authentication Module
- Resume Data Entry Module
- Template Selection Module
- Resume Processing Layer
- Resume Database Layer
- Data Management Layer
- Resume Generation and Download Module

TECHNOLOGIES USED

HTML, CSS, JavaScript, React / Angular, Node.js / Django / Flask, MySQL / MongoDB, Cloud Storage, PDF Generator, Authentication System.

WORKING PROCESS

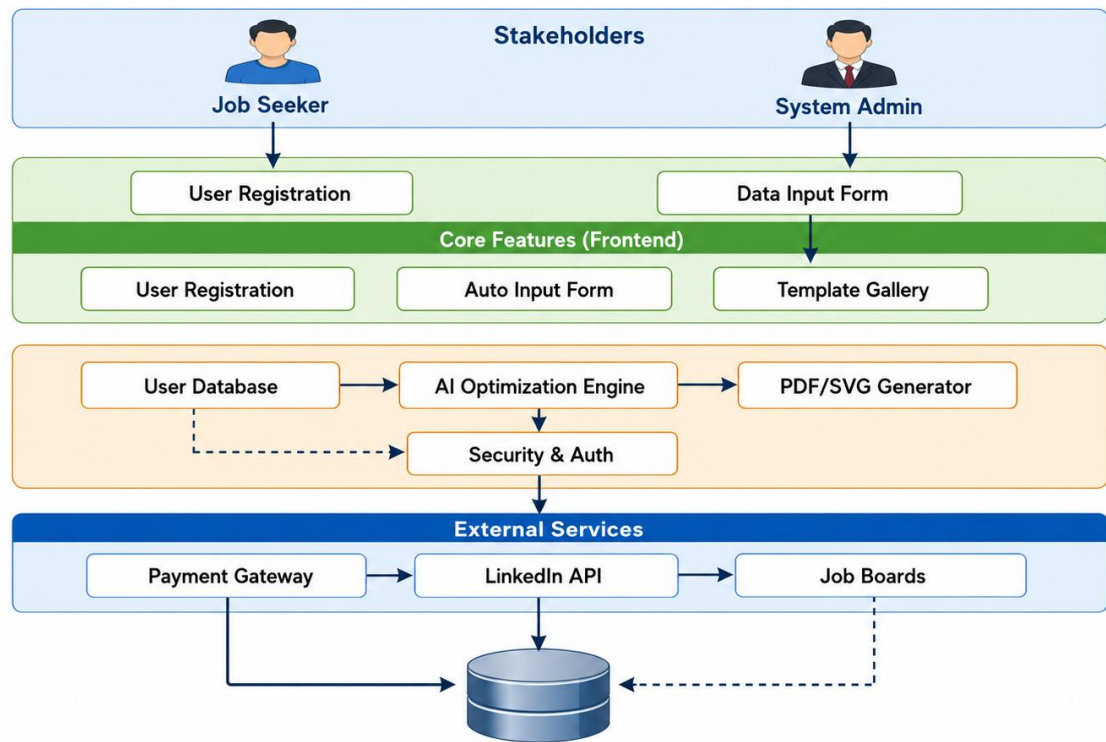

1. User opens the Online Resume Builder web application.
2. User registers or logs into the system.
3. User enters resume details such as personal information, education, skills, experience, and projects.
4. The system stores the entered details in the database.
5. User selects a suitable resume template.
6. The system processes the resume using the selected template.
7. Resume preview is displayed to the user.
8. User downloads or shares the final resume in PDF format.

ADVANTAGES

- Easy and quick resume creation
- User-friendly interface
- Professional resume templates
- Secure storage of resume data
- Resume preview and editing option
- PDF download and sharing support

LIMITATIONS

- Requires internet connection
- Limited customization in some templates
- User must enter accurate details
- PDF layout may vary based on the selected template

RESULT

Thus, the **Business Architecture of the Online Resume Builder System** was successfully designed. The system helps users create, edit, preview, download, and share professional resumes efficiently.
