EXPERIMENT – 2

FUNCTIONAL AND NON-FUNCTIONAL REQUIREMENTS

Aim

To study and analyze the Functional Requirements (FR) and Non-Functional Requirements (NFR) of the **Online Resume Builder System** for creating, editing, customizing, exporting, and sharing professional resumes.

Description

The **Online Resume Builder System** is a web-based application developed to help users create professional resumes easily. The system allows users to register, log in, create resumes, enter personal details, add education, work experience, skills, and projects, and view the resume through a live preview.

The **Functional Requirements** define the major functionalities of the system, including user authentication, resume creation, editing, preview, export, sharing, profile management, and admin control.

The **Non-Functional Requirements** describe the quality attributes of the system such as usability, responsiveness, performance, security, maintainability, and compatibility.

Functional Requirements

1. The system shall allow users to sign up by entering name, email, password, and role.
2. The system shall allow registered users to log in using email and password.
3. The system shall allow users to create a new resume.
4. The system shall allow users to edit personal details such as name, email, phone number, location, and LinkedIn/website.
5. The system shall allow users to add, edit, and remove education details.
6. The system shall allow users to add, edit, and remove work experience details.
7. The system shall allow users to add and remove skills and project details.
8. The system shall display a live preview of the resume while editing.

9. The system shall allow users to choose resume templates and customize color and font size.
10. The system shall allow users to export or download the resume as a PDF and share it using a link.

Non-Functional Requirements

1. The system should provide a simple and user-friendly interface.
2. The system should be responsive and work properly on desktops, tablets, and mobile devices.
3. The system should update the resume preview quickly without page reload.
4. The system should automatically save resume changes to avoid data loss.
5. The system should validate user login details securely.
6. The system should prevent duplicate user registration with the same email address.
7. The system should restrict admin features only to admin users.
8. The system should store user and resume data reliably using browser local storage.
9. The system should generate resumes in a neat, readable, and professional format.
10. The system should be compatible with modern web browsers.

Result

Thus, the Functional Requirements and Non-Functional Requirements of the **Online Resume Builder System** were studied successfully. The system requirements ensure easy resume creation, efficient editing, live preview, secure access control, PDF export, sharing, and user-friendly performance for building professional resumes.
