

CS23432 – SOFTWARE CONSTRUCTION

EXPERIMENT – 5

CREATE USER STORY IN AZURE DEVOPS

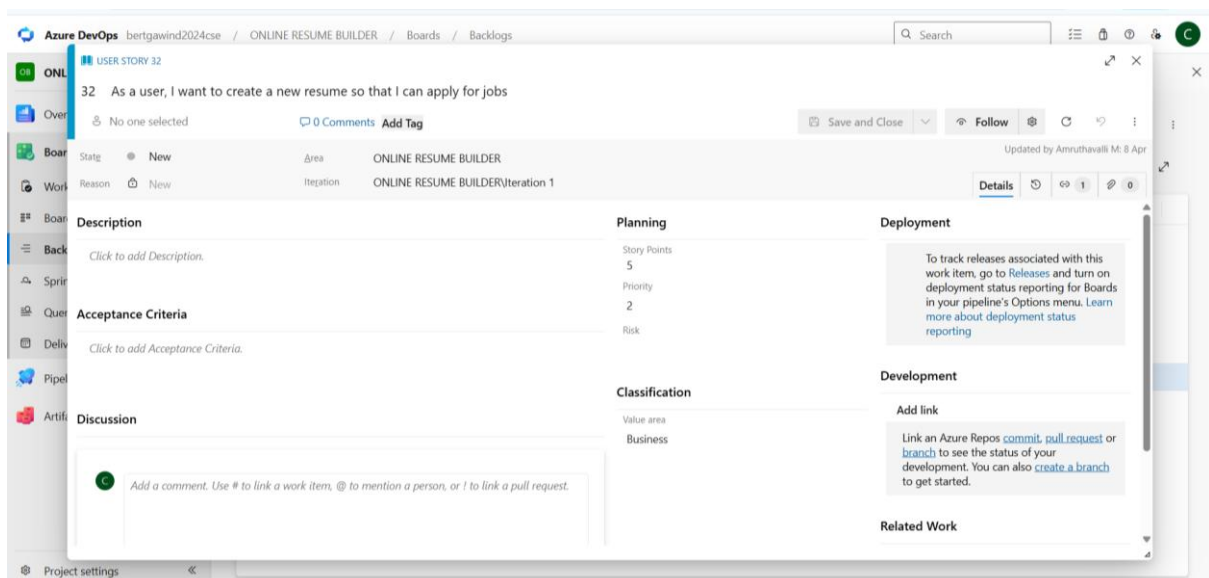

Aim

To create and manage User Stories in Azure DevOps for the **Online Resume Builder System** to support effective project planning, requirement tracking, and agile software development.

Description

In Agile methodology, a **User Story** describes a software feature from the end user's perspective. It helps developers understand user requirements clearly and organize project tasks efficiently.

For the **Online Resume Builder System**, user stories can be created for functionalities such as user registration, secure login, resume creation, editing resume details, adding resume sections, selecting templates, previewing resumes, downloading resumes, and managing user profiles.

Steps to Create a User Story in Azure DevOps

1. Open the web browser and go to <https://dev.azure.com>.
2. Sign in using a Microsoft account.
3. Create a new project or open the existing **Online Resume Builder** project.
4. In the left-side menu, select **Boards**.
5. Click **Work Items** or **Backlogs**.
6. Select **New Work Item**.
7. Choose **User Story** from the list.
8. Enter the title of the user story.
 - Example: *As a user, I want to create a new resume so that I can build a professional resume online.*
9. Add a detailed description and acceptance criteria.
10. Set priority, iteration, and assign the task to a team member if needed.
11. Click **Save & Close** to store the user story.
12. The created user story will appear in the project backlog for tracking and development.

Result

Thus, User Stories were successfully created in Azure DevOps for the **Online Resume Builder System**. The user stories help in organizing project requirements, tracking development progress, managing backlog items, and improving team collaboration in Agile software development.
