

CS23432 - SOFTWARE CONSTRUCTION

EXPERIMENT - 7

SEQUENCE DIAGRAM

Aim

To design and develop an Online Resume Builder application using software construction principles and to understand the process of requirement analysis, system design, implementation, and interaction between different modules through a sequence diagram.

Description

The Online Resume Builder is a web-based application developed to help users create professional resumes quickly and efficiently. The system allows users to register or log in, enter personal details, educational qualifications, skills, projects, certifications, and work experience, and generate a formatted resume automatically.

Sequence Diagram Explanation

The sequence diagram represents the interaction between the user and the system components during the resume-building process.

Step 1: The user opens the Online Resume Builder application and logs in or creates an account.

Step 2: The system validates the login credentials and grants access to the user dashboard.

Step 3: The user enters personal details such as name, email, contact number, and address.

Step 4: The user enters educational details, skills, projects, certifications, and work experience.

Step 5: The application sends the entered data to the database where the information is stored.

Step 6: The system retrieves and processes the data entered by the user.

Step 7: The system generates a formatted resume based on the selected template.

Step 8: The generated resume is displayed as a preview to the user.

Step 9: The user reviews the resume and downloads it in the required format such as PDF.

The sequence diagram illustrates how the user interacts with the system and how data flows between the interface, application logic, and database components.

Result

Thus, the Online Resume Builder project was successfully designed and developed using software construction principles. The system efficiently allows users to create, edit, preview, and generate professional resumes, demonstrating the practical implementation of software construction concepts.
