

CS23432 - SOFTWARE CONSTRUCTION

EXPERIMENT - 8

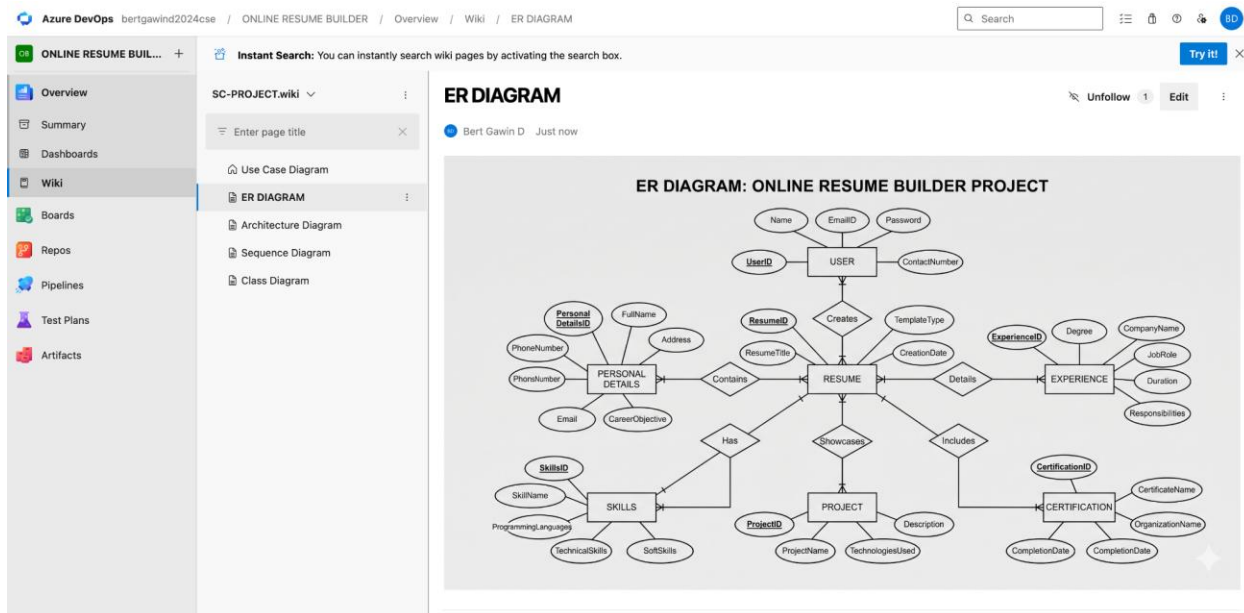

ER DIAGRAM

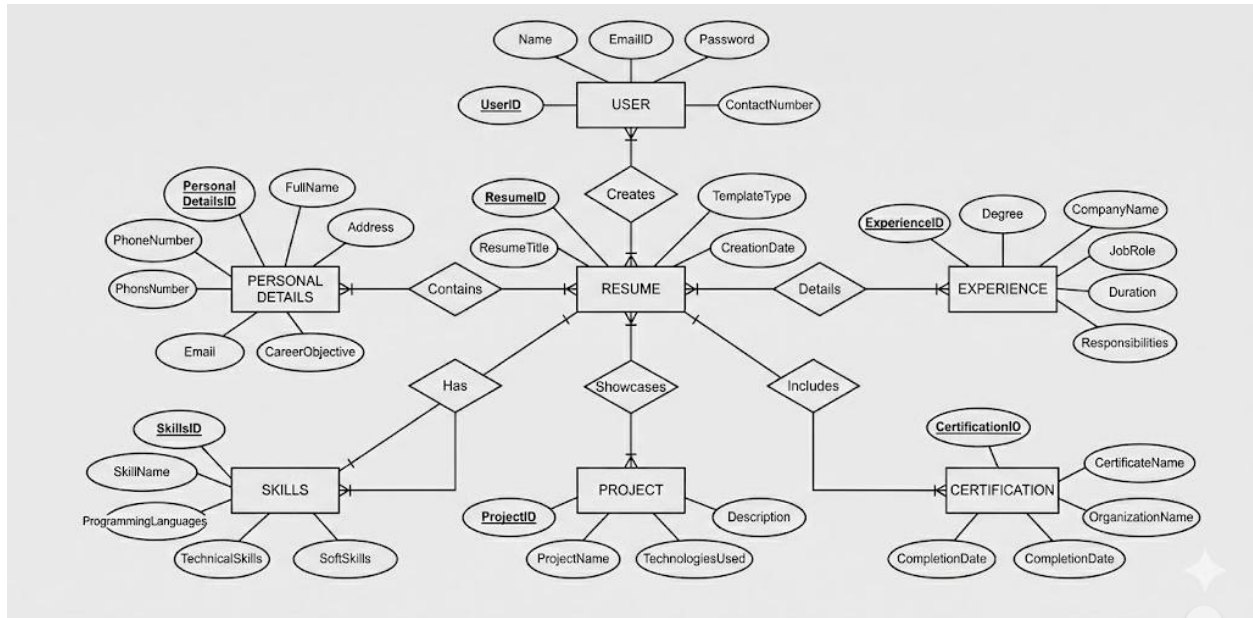

Aim

To design and develop an Online Resume Builder application using software construction principles and to understand the relationship between system entities using an Entity Relationship (ER) diagram.

Description

The Online Resume Builder is a web-based application designed to assist users in creating professional resumes in a simple and efficient manner. The system enables users to register, log in, enter personal information, educational qualifications, skills, projects, certifications, work experience, and generate resumes automatically.

ER Diagram Explanation

The ER (Entity Relationship) diagram represents the entities involved in the Online Resume Builder system and the relationships among them.

Entities and Relationships:

1. User Entity

- Stores user information such as User ID, Name, Email ID, Password, and Contact Number.
- A user can create and manage one or more resumes.

2. Resume Entity

- Stores resume-related details such as Resume ID, Resume Title, Template Type, and Creation Date.
- It acts as the main entity connecting other resume sections.

3. Personal Details Entity

- Contains user information such as Name, Address, Phone Number, Email, and Career Objective.
- Each resume contains one set of personal details.

4. Education Entity

- Stores educational qualifications including Degree, Institution Name, Year of Passing, and Percentage/CGPA.
- A resume can contain multiple educational records.

5. Skills Entity

- Stores skills such as programming languages, technical skills, and soft skills.
- A resume can have multiple skills.

6. Project Entity

- Stores project details including Project Name, Description, and Technologies Used.
- Multiple projects can be associated with a resume.

7. Experience Entity

- Contains work experience details such as Company Name, Job Role, Duration, and Responsibilities.
- One resume can contain multiple experience entries.

8. Certification Entity

- Stores certification details such as Certificate Name, Organization Name, and Completion Date.
- Multiple certifications can be linked to a resume.

Result

Thus, the Online Resume Builder project was successfully analyzed using an ER diagram. The relationships between various entities were identified and represented effectively, enabling proper database design and implementation of the system.
