EXPERIMENT – 9

SYSTEM ARCHITECTURE

AIM

To design and implement an **Online Resume Builder System** that allows users to create, edit, customize, preview, export, and share professional resumes using a web-based architecture.

OBJECTIVE

- To allow users to register and log in to the resume builder system.
- To create and manage professional resumes.
- To add personal details, education, experience, skills, and projects.
- To provide live resume preview while editing.
- To support resume templates, color customization, and font size adjustment.
- To export the resume as a PDF and share it using a link.
- To provide an admin panel for managing users and resumes.

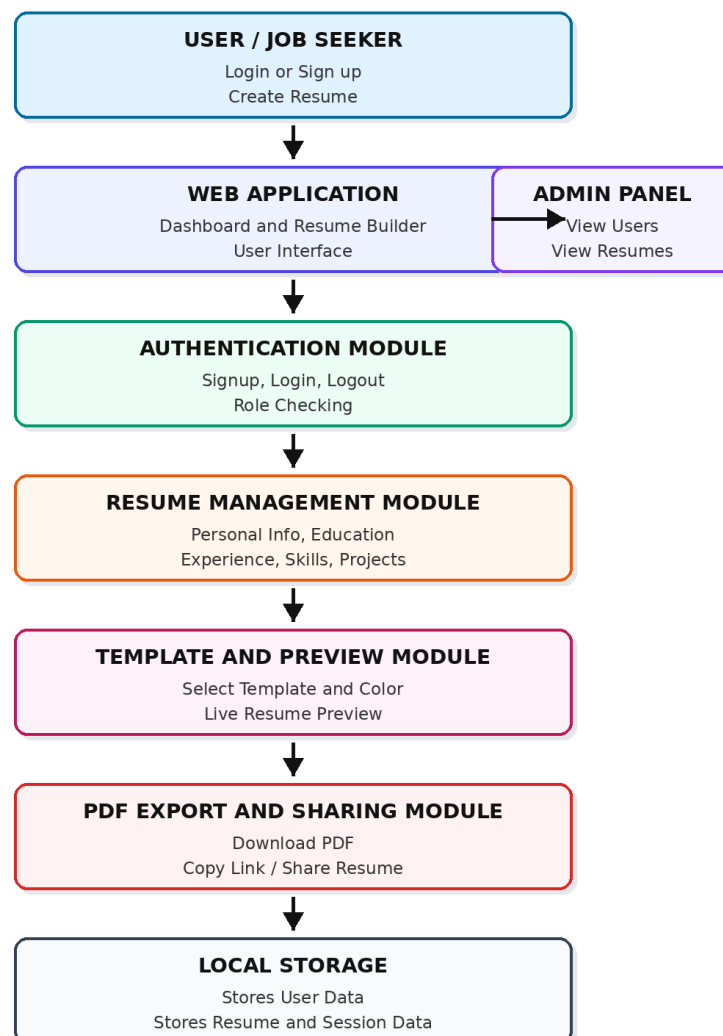

DESCRIPTION

The **Online Resume Builder System** is a web-based application that helps users create professional resumes easily. Users can sign up or log in, create a new resume, enter resume details, customize the design, preview the resume, and download it as a PDF.

The uploaded implementation code contains modules for authentication, dashboard, resume editor, live preview, templates, sharing, PDF export, local storage, and admin panel. The system stores users, resumes, and session data using browser local storage. It also supports auto-save, resume duplication, deletion, and admin-based user management.

The system architecture consists of the following modules:

- Web Application
- Authentication Module
- Resume Management Module
- Design and Template Module
- Live Preview Module
- PDF Export and Sharing Module
- Data Storage
- Admin Panel

Online Resume Builder System Architecture

TECHNOLOGIES USED

- HTML
- CSS
- JavaScript
- Local Storage
- jsPDF Library
- Web Browser
- Responsive Web Design

WORKING PRINCIPLE

1. User opens the Online Resume Builder web application.
2. User signs up or logs in using email and password.
3. After login, the user is redirected to the dashboard.
4. User creates a new resume or edits an existing resume.
5. User enters personal details, education, experience, skills, and projects.
6. The system displays a live preview of the resume.
7. User selects a template and customizes color and font size.
8. The system auto-saves resume data in browser local storage.
9. User downloads the resume as a PDF or shares it using a link.
10. Admin users can access the admin panel to view users and resumes.

ADVANTAGES

- Easy and fast resume creation.
- User-friendly interface.
- Live preview while editing.
- Multiple resume templates.
- PDF export option.
- Resume sharing option.
- Auto-save prevents data loss.
- Admin panel for user and resume management.

LIMITATIONS

- Data is stored only in browser local storage in the current implementation.
- Internet is required for loading external libraries such as jsPDF.
- Advanced security is limited because there is no backend database.
- Resume sharing link is simulated and not connected to a real server.
- Data may be lost if browser storage is cleared.

RESULT

The **Online Resume Builder System** was successfully designed with modules for authentication, resume creation, editing, customization, live preview, PDF export, sharing, data storage, and admin management. The system helps users create professional resumes efficiently through a simple web-based interface.
